1 Introduction

2 Perspectives on Regulation Management

3 A Unified View on Regulation Management

4 Analysis of Frameworks

5 Conclusions and Future Work

Context

In a multi-agent system (MAS), agents can be governed by *regulations*.

Regulation management denotes the capabilities (i.e., functionalities, procedures, mechanisms) and the representations (e.g., norms, rules, sanctions) used to regulate MAS.

Problematic

Regulation management has been studied from *various perspectives*:

Problematic

Regulation management has been studied from *various perspectives*:

- *top-down approach* [Cliffe et al., 2006, Noriega and de Jonge, 2016] or *bottom-up approach* [Andriguetto et al., 2013, Savarimuthu et al., 2007]

Problematic

Regulation management has been studied from *various perspectives*:

- *top-down approach* [Cliffe et al., 2006, Noriega and de Jonge, 2016] or *bottom-up approach* [Andriguetto et al., 2013, Savarimuthu et al., 2007]
- *collective mechanism* [Bicchieri, 2005] or *individual mechanism* [Conte et al., 2013]

Problematic

Regulation management has been studied from *various perspectives*:

- *top-down approach* [Cliffe et al., 2006, Noriega and de Jonge, 2016] or *bottom-up approach* [Andriguetto et al., 2013, Savarimuthu et al., 2007]
- *collective mechanism* [Bicchieri, 2005] or *individual mechanism* [Conte et al., 2013]
- *centralized architecture* [Noriega and de Jonge, 2016] or *decentralized architecture* [Cliffe et al., 2006, Conte et al., 2013, Vasconcelos et al., 2012]

Problematic

Regulation management has been studied from *various perspectives*:

- *top-down approach* [Cliffe et al., 2006, Noriega and de Jonge, 2016] or *bottom-up approach* [Andriguetto et al., 2013, Savarimuthu et al., 2007]
- *collective mechanism* [Bicchieri, 2005] or *individual mechanism* [Conte et al., 2013]
- *centralized architecture* [Noriega and de Jonge, 2016] or *decentralized architecture* [Cliffe et al., 2006, Conte et al., 2013, Vasconcelos et al., 2012]
- *regimented* with rigid constraints or *enforced* with soft constraints [Jones and Sergot, 1994, Pasquier et al., 2006]

Problematic

Regulation management has been studied from *various perspectives*:

- *top-down approach* [Cliffe et al., 2006, Noriega and de Jonge, 2016] or *bottom-up approach* [Andriguetto et al., 2013, Savarimuthu et al., 2007]
- *collective mechanism* [Bicchieri, 2005] or *individual mechanism* [Conte et al., 2013]

Challenging to grasp the range of design options available and identify the most suitable to regulate MAS!

Objective

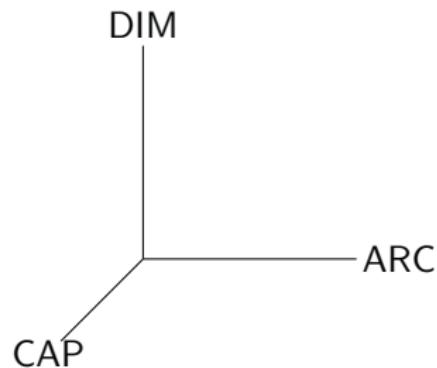

Propose *a unified view on regulation management in MAS* based on three perspectives and discuss the possible design options to govern MAS.

Multi-Agent Oriented Views on Regulation Management

Organization-Centric Regulation Management

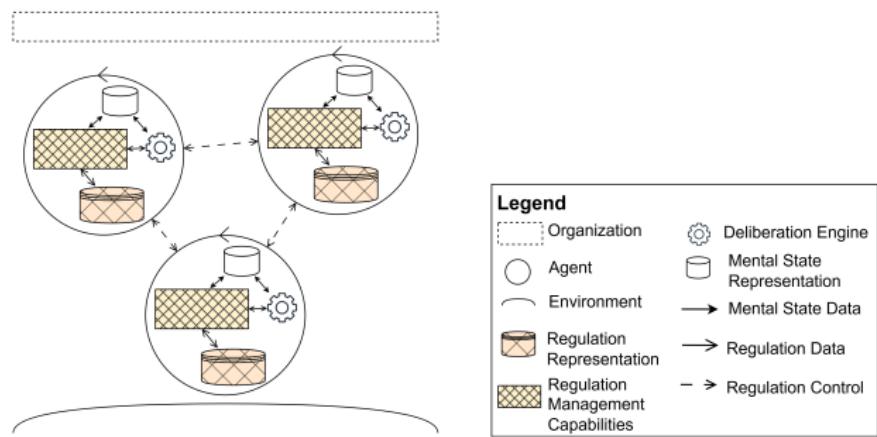

The regulation management representations and capabilities are made with abstractions (e.g., roles, groups, norms) and mechanisms of the **Organization dimension** of the MAOP paradigm

Multi-Agent Oriented Views on Regulation Management

Agent-Centric Regulation Management

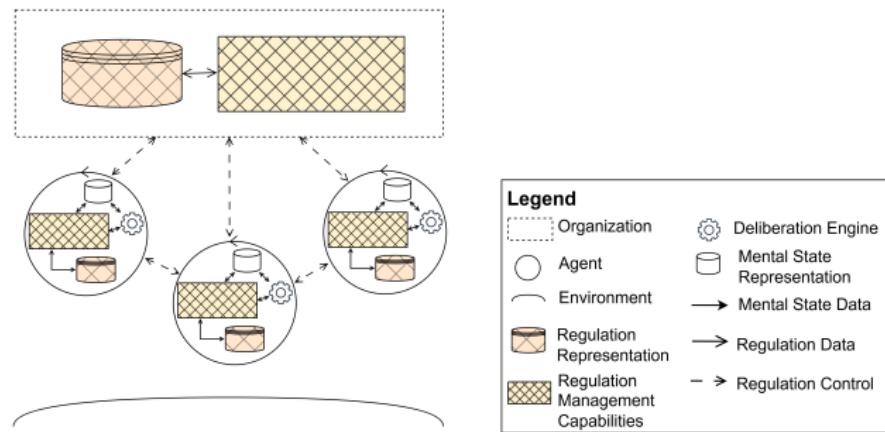

The regulation management representations and capabilities are made with abstractions (e.g., beliefs, goals, plans) and mechanisms of the **Agent dimension** of the MAOP paradigm

Multi-Agent Oriented Views on Regulation Management

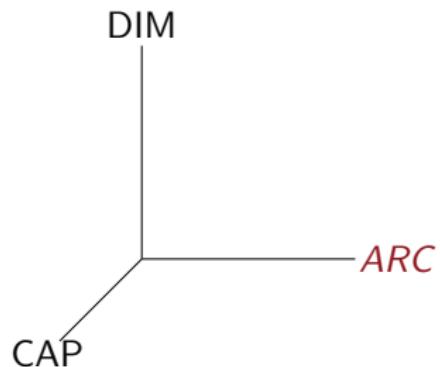

Hybrid Organization-centric and Agent-centric Regulation Management

The regulation management representations and capabilities are made with abstractions and mechanisms of both the **Organization** and **Agent** dimensions of the MAOP paradigm

Architectural Perspective

- Regulation Management Capabilities Perspective (CAP)
- MAOP Dimensions Perspective (DIM)

Analysis of Frameworks

Analysis of Frameworks

Focus on...

- 1 Introduction
- 2 Perspectives on Regulation Management
- 3 A Unified View on Regulation Management
- 4 Analysis of Frameworks
- 5 Conclusions and Future Work

Conclusions

The unified view serves as a reference grid to

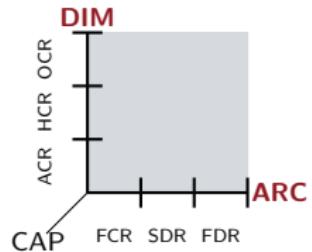

- identify possible design options (*e.g., to support choosing regulation management for a particular system*)
- explore opportunities and challenges (*e.g., hybrid-centric regulation management and adaptation on the regulation management system*)

Conclusions

The unified view serves as a reference grid to

- identify possible design options (*e.g., to support choosing regulation management for a particular system*)
- explore opportunities and challenges (*e.g., hybrid-centric regulation management and adaptation on the regulation management system*)

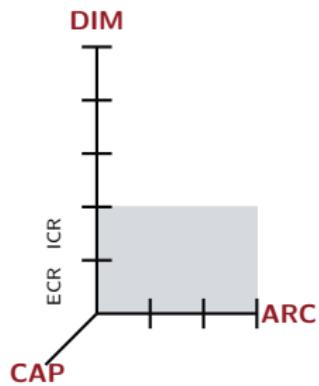

Future Work

On the unified view:

- complete the unified view on regulation management (*i.e., including the environment-centric and interaction-centric perspectives and their hybrid combinations*)
- evaluate formally the benefits and limitations of the design options

Practically:

- investigate the *adapt capability* in the Jason normative agent and integrate it into a *hybrid-centric* regulation with JaCaMo
- investigate the *adaptation of the regulation management system* in JaCaMo

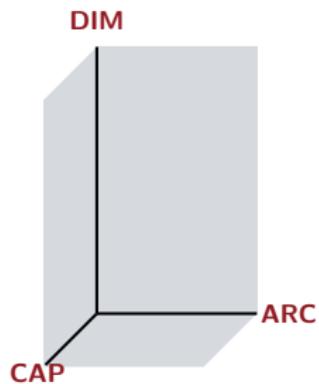

Future Work

On the unified view:

- complete the unified view on regulation management (*i.e., including the environment-centric and interaction-centric perspectives and their hybrid combinations*)
- evaluate formally the benefits and limitations of the design options

Practically:

- investigate the *adapt capability* in the Jason normative agent and integrate it into a *hybrid-centric* regulation with JaCaMo
- investigate the *adaptation of the regulation management system* in JaCaMo

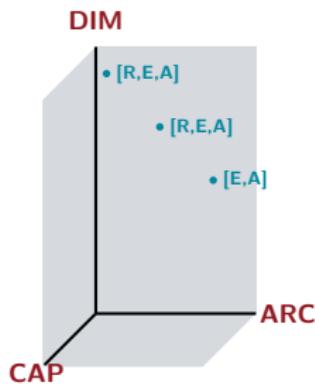

Future Work

On the unified view:
